

## Making User Access Control Simple

In a world of device proliferation and Bring-Your-Own-Device (BYOD) policies, IT teams face a difficult dilemma. How do they ensure maximum productivity for all end users while protecting the organization's assets from security threats? Relying on manual user access control can result in higher cost of doing business, driven by poor user experience and IT productivity loss. There is a better alternative. A device registration portal (DRP) with IPAM integration helps network teams streamline the management of device identities, allowing IT staff to get the controls they need to manage device identities, secure the enterprise, and give users fast access to the network.

### The Solution – BlueCat Device Registration Portal (DRP)

Your company's investment in DDI must securely streamline network user access control. BlueCat Device Registration Portal (DRP) is designed to meet internal IT security requirements and improve network productivity by simplifying internal network access control for third-party devices. Whether your goal is to improve self-service, reduce time to network access, limit devices on the network, or audit and track users and devices on the network, BlueCat DRP makes it easy.

### Benefits

**Improve User Experience** - Make it easy for users to access the network

**Accelerate Security Response** - Meet internal security requirements and stop threats

**Increase IT Productivity** - Manage compounding device growth

## Features

### Self-service

A user friendly self-service web portal, with secure access using HTTPS (SSL).

### Administration

Manage devices with IP Lease Management through IPAM integration.

### User authentication

Restrict or allow access to users through authentication services or optional guest access.

### Device on-boarding & off-boarding

Rapidly and securely get devices onto and off of the network without IT involvement.

### Track & control

Easily blacklist mac addresses or users and limit the number of devices on the network.
