

# Five Reasons

WHY YOU SHOULD TRY MICETRO TODAY

1

Install Micetro in less than one hour.

2

No need to change your existing environment if you're running Microsoft

3

Standardize your DNS, DHCP, and IPAM (DDI) on premises and in the cloud

4

Find current configuration issues, IP conflicts, and orphaned objects

5

Enhance your current Microsoft or multi-vendor environment with easier troubleshooting and network automation

## CUSTOMER TESTIMONIAL

"For me it's about IP allocation where we can see the whole IP space, knowing which IP is mapped to which name. [With Micetro] it's much easier to see what's free and where we want to put things, rather than probing the IPs one by one through DNS. For us that's a key feature that's really helpful."

*Charlie Alvarez, IAM Service Owner & Team Manager, NI (National Instruments). Confirmed by Tolly.*

95%

## CUSTOMER RETENTION RATE

Micetro is an overlay DDI solution which makes the underlying DNS and DHCP services essentially invisible and fungible, removing the burden of the learning curve when new services are required.

# Getting started

## THE ULTIMATE MICETRO CHECKLIST

Sign up for the free trial.

Prefer video? Go to our Deployment Playlist on YouTube to see which Micetro components you need.

Prefer the written word? Check out the Onboarding Guide.

Import your IP information using a CSV file, discovery, or by adding networks manually (as shown in the guided tutorials).

Connect to Current DNS/DHCP Services (as shown in the guided tutorials).

Set up Role-Based Access Control.
