

BlueCat Integrity vs. other DDI vendors

Unified. Intuitive. Built for what's next.

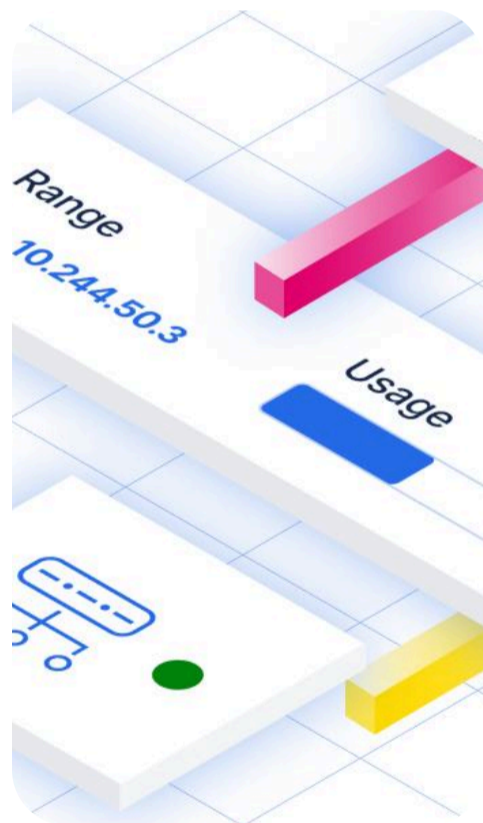

Four out of five of the world's largest banks trust BlueCat

Modern, standards-based architecture for hybrid and multicloud management

BlueCat Integrity is a unified, intuitive platform built for what's next in enterprise DNS, DHCP, and IP address management (collectively known as DDI). It is entirely based on OpenAPI standards, featuring RESTful APIs with complete Swagger documentation, ensuring seamless automation and extensibility.

Using a hub-and-spoke model that separates the management plane (Address Manager) from the services plane (BlueCat DNS/DHCP servers), Integrity is uniquely architected for true linear scalability. Unlike grid-based solutions with hard limits on IP counts, zone sizes, or throughput, this design eliminates architectural bottlenecks, allowing customers to scale services independently without re-architecting or repurchasing licenses.

The user interface is modern, accessible, and consistent—not a patchwork of legacy elements—and supports multiple languages, unlike competitors limited to English.

Advanced visibility, proactive monitoring and triage, and predictable, flexible licensing

BlueCat delivers integrated Prometheus-based monitoring and data export, providing real-time network visibility without requiring additional purchases. This built-in monitoring surpasses the capabilities of legacy solutions, which often rely on expensive reporting modules to reveal similar insights. For organizations needing deeper intelligence, LiveAssurance is available as an optional add-on license. It proactively inspects the environment, detects anomalies, triages issues, and recommends remediation, serving as an automated DDI expert.

Overall, BlueCat's licensing approach ensures flexible, predictable cost management. Customers receive all-inclusive, portable licenses with the freedom to deploy in data centers or cloud environments. Multi-year subscription options avoid surprise expenses, hidden fees, or forced upgrades tied to infrastructure changes. In sharp contrast to token-based pricing models, which can be confusing, difficult to budget against, and obscure the actual cost of ownership, BlueCat's transparent model supports long-term planning, smooth scaling, and consistent access to core functionality across the entire enterprise.

“

Integrity earns the 'DDI winner' title by delivering functionality that's not only modern, but operationally meaningful.”

Architecture Engineering, large
health care data provider

Exceptional support and proven, low-risk migration

BlueCat offers high-touch, personalized customer support, as reflected in an industry-leading Net Promoter Score (NPS) of 70+ and consistent 4- and 5-star rankings on PeerSpot and Gartner Peer Reviews. Migrating critical DDI services was once seen as complex and risky, but BlueCat's proven methodology has transformed the process into a smooth, phased transition that minimizes risk and downtime. Trusted by many of the world's largest enterprises, BlueCat makes changing vendors safer and easier than ever before, maintaining the stability and resiliency of the network.
